

Problem

My garage door only goes up a few inches and stops.

Check for . . .

- Is a spring broken?
- Is the opener out of adjustment?
- Is there something obstructing the track?
- If you have a lock, is it in the closed position?
- Is the cable off?

Problem

When my garage door goes down, it reverses and goes back up.

Check for . . .

- Are the photo eyes obstructed or out of alignment?
- Does the opener light flash on & off when the door is fully open again?
- Are the lens on the photo eyes dirty?
- Are the photo eye LED lights lit?
- * The opener sensitivity may be off—refer to your owners manual or call a qualified garage door technician.

Problem

My opener is not working at all.

Check for . . .

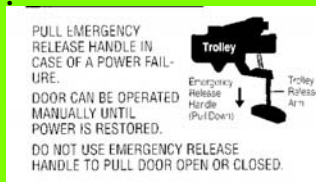

Test the opener outlet for AC power. If there is no power, check the fuse or breaker. Also check the ground fault breaker on the main receptacle (outlet) in the garage to see if it is tripped.

Problem

How do I get my vehicle out of the garage in case of a power failure?

Solution . . .

You may pull the emergency release handle located where the opener is attached to the door. Then you would need to manually lift the door.

Problem

My keyless entry &/or vehicle remote control does not work.

Check for...

Replace battery so you get a stronger signal.
